

# Decatur Memorial Hospital

Decatur, IL

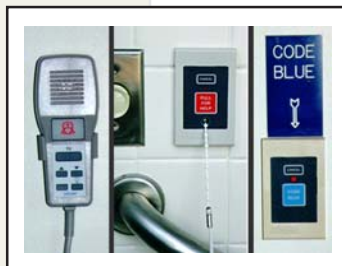

## Hospital

### Nurse Call Communications Systems

*Decatur Memorial Hospital provides advanced medical care at many levels in a medium sized industrial city in central Illinois. The diversity of care creates a need for a wide variety of integrated communications systems to meet the needs of patients and staff.*

Full-feature patient stations are easily operated and understood by both patients and staff. The clean lines and sealed faces of the Dukane stations blend well with the hospital decor while providing surfaces that are easily cleaned.

The central equipment for the Transitional Care Unit and the Intensive Care Unit is wall mounted and easily accessed for service and maintenance. All wire is neatly marked and corresponds with Dukane factory specifications.

*Dukane Activity Reporting and Management System*

## Multiple Systems

### ProCare Healthcare Communications

Code Blue calls from the TCU and the ICU are annunciated on the floor in the Communications Center for house announcement by telecommunications staff over the hospital paging system. This centralized Code Blue System will be expanded to all of the nurse call systems as the hospital pursues an upgrade of existing ProCare 4000 Systems to ProCare 6000 Advanced Healthcare Communication Systems. The migration from ProCare 4000 to ProCare 6000 is easily established because the systems use the existing wiring and patient stations.

The ProCare 4000 and ProCare 6000 systems are connected to the Dukane ARMS (Activity Reporting and Management System.) The ARMS system allows hospital staff to monitor and document call response and performance on the nurse call system via one centrally located computer terminal. Performance and staff levels can easily be evaluated from the data this system captures.

In the Transitional Care Unit, the Dukane ProCare 6000 Advanced Healthcare Communication System was selected to provide the nurse call and integrated code blue notification.

*In the recovery area, the Dukane ProCare 1000 Tone and Light System is used for simple call notification.*

*Taking Technology to a Higher Level*
