

# Uncle Bill's U-Store

Normal, IL

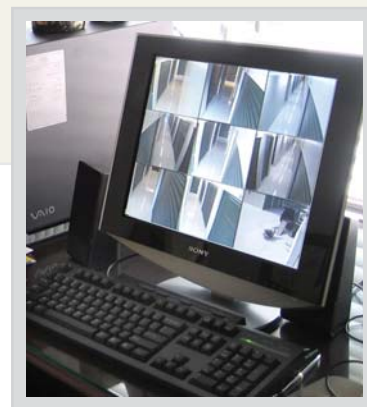

## Storage Facility and Offices Digital Video Surveillance System

*Uncle Bill's U-Store is on the cutting edge of service and business management. They offer climate and humidity controlled units, along with their regular storage units. They provide added security for their clients with digital video surveillance. The added security deters vandalism and peace of mind to customers when they visit their units.*

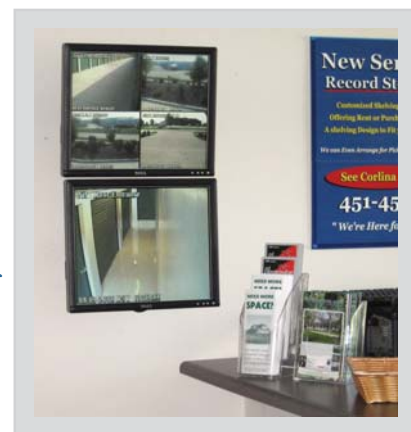

The facility has 3 - DVR units that will handle up to 16 cameras each. They have 38 cameras covering multiple angles and views of the storage complex. Monitoring is viewed in the lobby and by several other desktop units. The monitoring software is custom configured to display multiple combinations of camera views.

The DVR units record high resolution images onto a hard drive and can be easily accessed and reviewed when questions arise about a certain event. Search features allow quick review of an exact place in time.

*Custom software provides unlimited combination of camera views.*

Our security specialist worked with U-Store to find the best surveillance set-up and system for their situation. They were very please with the solution proposed and after the system was in place were also pleasantly surprised to find added property management benefits to having the surveillance in place.

*Lobby displays real time views of U-Store facility grounds.*

*Taking Technology to a Higher Level*
